SQLite

Commands

# SQLite

- SQLite is a C-language library that implements a small, fast, self-contained, high-reliability, full-featured, SQL database engine. SQLite is the most used database engine in the world.
- SQLite3 can be integrated with Python using sqlite3 module, which was written by Gerhard Haring

# Commands

- **Connect**      Creates a database
- **Cursor**      This routine creates a **cursor** which will be used throughout of your database programming with Python.
- **Execute**      This routine executes an SQL statement
- **Commit**      This method commits the current transaction
- **Fetchall**      This routine fetches all (remaining) rows of a query result, returning a list.
